## Senior Web Development Engineer

Our client is looking for passionate, experienced software developers to join us and help to solve a challenging set of problems in space packed full of opportunities. Our client provides a web service that is pioneering cloud computing by providing resizable compute capacity in the cloud. It gives any developer complete control of their computing resources and lets them run on their proven computing environment.

The ideal candidate is obsessive about creating the perfect user experience for millions of users. Creating the perfect user experience on the web requires a blend of technical knowledge, customer obsession and agility. Our web systems need to be extremely responsive and highly- scalable. If these kinds of challenges interest you, drop us a line.

### Job Description

- Analysis and design of new features and interfaces for the web
- Optimizing current products to improve its performance and usability
- Support, troubleshooting and resolving of critical issues in production
- Working with a team, to achieve the ultimate user experience
- Analyzing application and user metrics to define our team strategy

The following will ensure a successful application:

- At least a four year degree or diploma in Computer Science or Engineering
- Nuts and bolts understanding of the web including HTTP, HTML, CSS, Javascript
- Knowledge and appreciation of web standards
- Knowledge of one or more Javascript frameworks e.g. JQuery, YUI, Ext-JS
- Working knowledge of relational databases and back-end programming (C++, Java, Python)
- Strong customer focus
- Between 2 and 5 years of practical experience building production web applications
- Demonstrated ability to achieve stretch goals
- Expertise in delivering high-quality, innovative applications
- Strong analytical skills with excellent problem solving abilities.
- Strong desire to build, sense of ownership, urgency, and drive.
- Excellent written communication and verbal agility are strong assets.
