Software Development Engineers

Our client is looking for passionate, experienced software developers to join them and help to solve a challenging set of problems in space packed full of opportunities. Our client provides a web service that is pioneering cloud computing by providing resizable compute capacity in the cloud. It gives any developer complete control of their computing resources and lets them run on a proven computing environment.

The ideal candidate will be clearly passionate about the large opportunity the client presents and about web services in general. This person has thrived and succeeded in delivering high quality solutions in a hyper-growth environment where priorities shift fast. If you're looking to solve problems ranging from efficient resource allocation in the face of imperfect information, building touchless automation to manage millions of machines, or sifting through billion row databases looking for patterns then drop us a line.

The following will ensure a successful application:

- Strong customer focus
- 1-3 years of industry experience, including internships.
- Linux operating system development
- Experience with Ruby, Perl, Java or C/C++.
- Experience with Linux development.
- Expertise in delivering high-quality, innovative applications
- BS/MS in Computer Science or equivalent
- Strong analytical skills with excellent problem solving abilities.
- Knowledge of system performance methodologies along with hands on empirical monitoring
- Strong desire to build, sense of ownership, urgency, and drive.
- Excellent written communication and verbal agility are strong assets.
