Technical Project Manager

The Technical Project Manager has three primary responsibilities:

- Owns the technical design once the Business Solution Specification (BSS) or Contract Addendum Technical Appendix (in the case of smaller projects) has been handed over from the Solution Architect or regional team.
- Provides guidance to developers and implementation engineers in terms of design, code review, testing, installation, configuration and testing support activities.
- Acts as a technical consultant to the client on products and customizations.

Detailed responsibilities include:

- Technical Project Managers should be prepared to travel periodically in order to meet with clients. This role is client-facing and requires frequent verbal and written interaction with clients and other vendors.
- Draft Business Requirement Specifications (BRSs) or Contract Addendums, when required.
